

Founder Self-Analysis

Vincent Hall • Using the Future Stars Baseball Club method to study his own swing

Project	Future Stars Baseball Club	Focus	Founder Self-Analysis
Video Sources	Side + Back; Tee + Toss	Theme	Contact depth, timing window, bat-path direction

Purpose

Vincent applied the same video-based analysis framework used for younger players to his own swing. This founder self-analysis is not a basic mechanics report; it is a refinement project showing how Vincent uses athletic experience, coaching observation, and motion-analysis thinking to evaluate his own development.

Method	Key Findings
Side views were used to evaluate load, stride, front-foot landing, contact depth, barrel release, and finish. Back views were used to evaluate stride direction, front-side opening, hip rotation direction, and finish path. Tee swings showed the controlled baseline pattern. Toss swings revealed more realistic timing and decision-window issues.	Strong foundation: athletic stance, lower-half involvement, front-leg block, and complete finish. Advanced issue: contact point sometimes gets too far out front. Timing refinement: front foot down should mean ready to swing, not automatic launch. Barrel direction: the barrel sometimes releases early and finishes around the body rather than staying through the middle. Training goal: late decision with a fast, aggressive swing.

Project Value

This case is valuable for the Future Stars Baseball Club website because it shows that Vincent is not only analyzing other players; he is also applying the same standard to himself. It connects baseball, video analysis, coaching, biomechanics, and engineering-style thinking in one authentic student-led project.

Website Copy

Founder Self-Analysis: Refining Contact Depth and Timing Window Vincent used the same video-based framework from Future Stars Baseball Club to study his own swing. Using side and back views from tee and front-toss sessions, he identified advanced refinement points: contact depth, early barrel release, front-side timing, and middle-field swing direction. The goal was not to rebuild his swing, but to improve adjustability against higher-level pitching.

Founder Self-Analysis is suitable for the Method, Case Studies, or Founder section of the Future Stars Baseball Club website.
