

Alex Hitting Video Analysis

Website Display Case Study - with scoring table

Player	Alex
Analysis Focus	Hitting Mechanics
Program	Future Stars Baseball Club
Format	Website Display Version
Includes	Multi-angle review + score + key screenshot sequences

Player Snapshot

Alex shows a solid hitting foundation with good athletic intent. Across tee and front-toss swings, he repeats a similar move from setup into stride and rotates through the ball with energy. The next step is not a full rebuild; it is making the move easier to repeat under game speed. The biggest gains should come from slightly simplifying the load, controlling the front side, keeping the head and chest from drifting, and letting the hands work more directly into the zone.

Current Strengths

- Athletic setup and confident swing intent.
- Good lower-half involvement with usable stride and weight transfer.
- Shows rotational energy through contact and finish.
- Tee and toss swings are broadly consistent, which is a good foundation for training.

Priority Improvement Areas

- Quiet the move slightly so timing is easier to repeat.
- Control the front side so the shoulders do not open too early.
- Create a more direct hand/barrel path into the zone.
- Maintain posture and head stability through contact and extension.

Video-Based Mechanics Score

Category	Score	Notes
Stance Stability	4.0 / 5	Athletic setup and confident starting position.
Load Timing	3.0 / 5	Leg lift and forward move can get a little big.
Hip Rotation	3.5 / 5	Good rotation energy, but front side can open early.
Bat Path	3.0 / 5	Hands and barrel can work more directly into the zone.
Contact Point / Quality	3.5 / 5	Usable contact foundation; needs more repeatable depth.
Follow Through	3.5 / 5	Strong finish intent; posture and balance can improve.
Total	20.5 / 30	Initial technical score: good foundation, needs repeatability.

Detailed Findings

1. Athletic foundation

Alex begins in a balanced, athletic position and swings with intent. This is a strong starting point and should be preserved.

2. Load/stride can get a little big

The leg lift and forward move help create rhythm, but when the move becomes large, it raises the timing demand. A slightly quieter gather would help the swing arrive on time more consistently.

3. Front side can open early

On some swings, especially in toss, the front side begins to open early. When that happens, the barrel can come around the ball rather than staying through it.

4. Hands can work more directly

Alex would benefit from getting the knob and hands into the hitting zone more directly. A cleaner hand path should improve contact quality and directional consistency.

5. Posture and finish

The swing shows effort and rotational commitment, but posture can rise or drift forward through contact. Better posture retention should improve balance and barrel control.

Recommended Development Plan

- Small-Leg-Lift Timing Drill: reduce the gather size slightly and repeat the same tempo every rep.
- Heel-Plant Pause Drill: land the front foot, pause briefly, then fire. This helps control the front side and sequence.
- Knob-to-Ball / Short Path Drill: feel the hands work to the ball instead of sweeping around it.
- Middle/Oppo Tee Drill: set the ball slightly deeper and drive line drives through the middle or opposite-middle.
- Balance-Through-Finish Drill: hold the finish for two seconds to check posture and body control.

Integrated Evaluation

Across both tee and toss views, Alex has a workable swing with athletic intent. The 20.5 / 30 score reflects a good foundation with clear room to improve timing, front-side control, and bat path.

Two-Week Tracking Goals

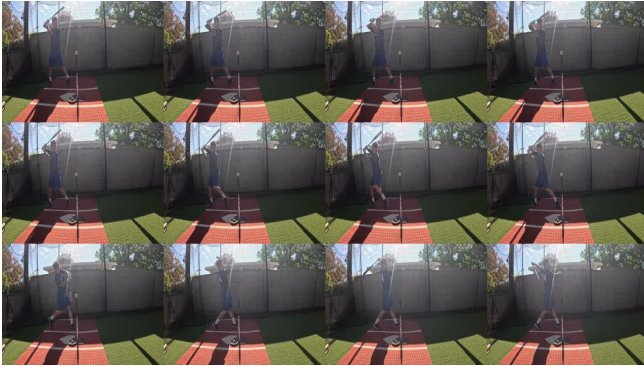

Training Goal	What Improvement Should Look Like
Timing	Quieter leg lift and fewer rushed swings.
Front Side	Front shoulder stays closed slightly longer after landing.
Bat Path	Hands work more directly into the zone; less around-the-body path.
Posture	Head/chest stay more stable through contact and finish.

Final Coaching Summary

Alex does not need a swing rebuild. He already has a usable, athletic swing. The best next step is to simplify the timing, stabilize the front side, improve hand direction, and keep posture through contact so the barrel can stay through the zone longer.

Key Reference Sequences

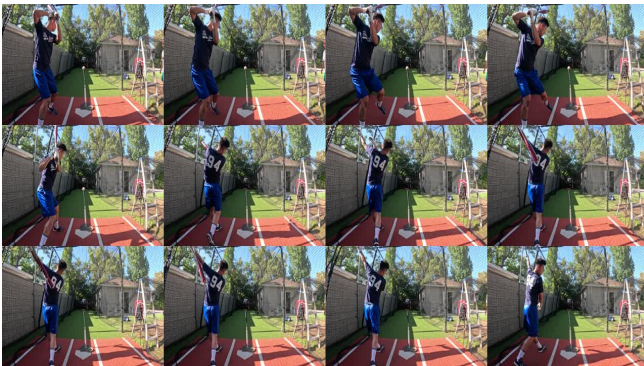

The following screenshots show representative sequences from Alex's tee and toss swings in both side and back views.

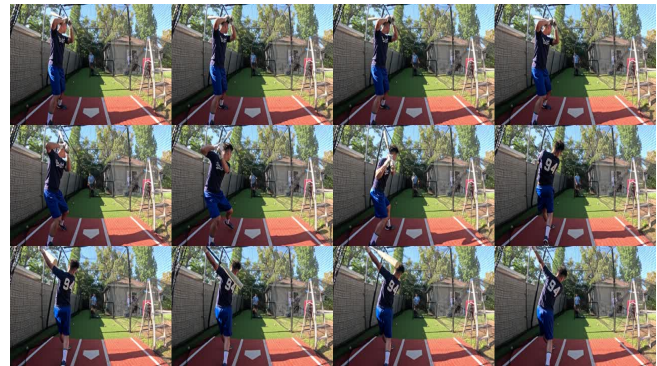

Side Tee - first swing sequence

Side Toss - first swing sequence

Back Tee - first swing sequence

Back Toss - first swing sequence
